

Project Review Schedules

Project Schedule for PG-DAC & PG-DBDA August 2024 batch

Academic Year: 2024-2025

Task	Date
Guide Allocation & Team Selection (by CDACD Project Coordinator)	Up to Jan 9, 2025
Submission of Project Title & Project Abstract	Up to Jan 10, 2025
Initial Review • Project title Justification • Objective and scope of the project • Time plan of the project	January 14, 2025
Review-1 By External Committee • Explanation of the identified Problem • Basic concepts related to your project • Literature review related to particular problem	January 27, 2025
Status report-1 (Synopsis) (Report after modification based on the suggestions by External Committee in Review 1)	January 31, 2025
Review-2- With Guide • Methodology and the overall proposed approach to solve the particular problem	February 10, 2025
Review-3 With Guide • Algorithms/ Methodology used to overcome the specific problem (general description of algorithms) • Data collection • Experimental setup • 10-30% of initial code implementation	February 14, 2025
Status report-2 With External Committee (Report after modification based on the suggestions in review-2 & 3)	February 17, 2025
Review-4 With Guide • Code implementation • Evaluation and Execution of the project • Result analysis • Performance comparison • 100% of code implementation	February 19, 2025
Final Review with Guide	February 20, 2025
Rough draft of your Project Report to be submitted to Guide	February 20, 2025
Final Project Report to be submitted & Viva Voce- With External Committee	February 20, 2025
• All final reports should be specified in the format given by the institute. • Absenteeism during the review dates will not be entertained. • The schedule is tentative and is subjected to change with prior intimation	

Project Guidelines

A reviewer monitors the running projects on a regular base to ensure the high-level quality projects been developed by Students. Monitoring of running projects is done by means of **Project Progress Reports (PPRs)** and **Project Reviews**.

- PPRs are handled in a separate instruction video
- A Project Review is a face-to-face project evaluation by a multidiscipline review team

The aim of a Project Review is to check if a project is heading towards successful innovative and exploitable results. Advice on corrective measures is provided if necessary.

Choosing a Project:- The idea for your project may be a proposal from a institute, Advisor or your own, or perhaps a combination of the three.

Guides:- The Guides are advised to give projects and suggest project titles focussing more on the current field of research/Problem and ensure the level of innovation. Also, Guides are advised to check for the formatting of the presentation and Project report/ Synopsis.

Following reviews are planned.

The first initial review is planned after roughly selection of the project title with Abstract via Team member and appointed project guide.

The Second Review-1 team members for their final project with their proposed title & project guide and to suggest it to the **external committee** with a brief abstract. Project report/ Synopsis to be prepared as per the guidelines and format given by the institute.

In the Status report-1 (Final Synopsis) In case of re-reviews, any number of re-reviews can happen depending on the discretion of the panel and it should happen in **Status report-1** within the prescribed time.

Guide, can initiate further steps (Review 2 - 5) to ensure the smooth implementation as deems appropriate of guidelines. And submit the status report-2(one- or two-pages max) to the External Committee in terms of presentation. If the work of the candidate is found to be insufficient or with plagiarism, the committee & Advisor will decide the further process.

In the Final Review - The last review will take place shortly before the end date of the project. Make an internal team and review the ready project before final project demonstration to the **external committee**.

Final Project Presentation and Demonstration One of the most important skills which the project aims to assess the student's ability to communicate project ideas and work. As part of the assessment students will be required to give a presentation and demonstration of project to Project Committee.

Project Requirements: Expectations from Students (in each Presentation)

Initial Review	First & Second Review	Third & Fourth Review	Fifth Review
Title Abstract Introduction Literature Survey Proposed System/SDLC Modules Split-up and Gantt Chart References	Title Abstract Architectural Design for Proposed System ER Diagram, DFD, Use case diagram (if necessary) Algorithms / Techniques used with complexity Expected outcomes References 10-30% of initial code implementation	Title Abstract Detailed Design (if any deviation) Contribution of the candidate (if any) Results obtained (intermediate) References 80% of code Implementation	Title Abstract Overall Design Experimental Results Performance Evaluation References Contribution of the Project 100% of code implementation – Demo

Approval Guidelines of Initial Review

- Comparison with the existing systems.
- Deliverables to be mentioned clearly for each review.
- Work distribution among team members. Evaluation based on the complexity of the work.

Note:

- The presentation should have maximum of 12 – 15 slides
- Presentation will be for 10 minutes
- System to be tested using testing software's.
- All Five reviews are compulsory.

External Committee

- The committee is advised to ensure the complexity of the problem statement solved through project work.
- All the three panel members must be presented during the review.
- Reviews to be conducted over online platform.

Guide to check

- Advised to check for the formatting of the presentation and all project documents submitted by students.
- Check for the attendance of the students (Regular meeting for the discussion).
- To ensure that each student of group has contribution in different stages of Project Work.
